ABSTRACT OF THE DISCLOSURE

In a computer system connected to a network, direct access from the computer network side to a computer is inhibited to prevent illegal data reading or rewriting, data destruction or the like. A first storage unit 5 106, a data recording unit 102 and a recording medium carrier 105 are connected to a first computer 101. A data reproducing unit 104 is connected to a second computer 103. The first computer 101 controls the data recording unit 102 to record data stored in the first storage unit 106 into a recording medium. Then, the first computer 101 controls the re- 10 cording medium carrier 105 to carry the recording medium 110 from the data recording unit 102 to the data reproducing unit 104. The second computer 103 controls the data reproducing unit 104 to reproduce the data recorded in the recording medium 110, and then transmits the reproduced data through the Internet 109.
